Who We Are—

TLX Technologies is a custom problem solving organization. We design and manufacture custom solutions for electromechanical applications. TLX has a vested interest in bringing our customers the best solution at the best price. TLX works extensively with our customers to make their spec better, more efficient and cost effective.

Our History—

TLX Technologies was founded in 1996 to bring to market several unique, high-speed digital valves for controlling the inflation of a vehicle air bag.

At that time there had been multiple fatalities of children due to the excessive forces transmitted to occupants during airbag inflation. The National Highway Traffic Safety Administration (NHTSA) was searching for ways to eliminate these fatalities caused by airbag inflation.

During the succeeding years, TLX adapted this technology to many other markets and applications.

Leadership Team—

Neil Karolek, President
Derek Dahlgren, Vice President

Our Customers—

TLX Technologies successfully designs and manufactures custom solenoids for applications in a variety of markets around the world including fire-protection, automotive, off-highway, medical and industrial as well as consumer and standby power system applications.

Our Location—

TLX Technologies is located in Waukesha, Wisconsin, just 18 miles west of Milwaukee.
